

SERVICE GUIDELINES

4 SERIES - *High Capacity Roof Vent*

General Description:

Airocle **4 Series** is a performance-based low profile natural extract ventilator providing reliable efficient natural ventilation due to known coefficient of discharges. Manufactured in accordance to Australian Standard AS2427, they provide a roof mounted weatherproof ventilation solution adaptable to all forms of roof sheeting.

Design Theory

The fully engineered ridge or slope mounted design provides reliable high performance updraft ventilation through the use of guide vane and wind jump diaphragms. Combined with quality Australian manufacture using Australian materials, the **4 Series** is warranted for 2 years.

Foreign Objects & Self-Cleaning

The engineered design and unique drainage system allows wind borne matter and rain to be effectively carried to the outside of the ventilator while ensuring weather-tightness. Bird wire when fitted will exclude birds from the ventilator throat.

Inspection Requirements

An inspection of the 4 Series Ventilator should occur every twelve months to ensure:

- No build up of residue
- No bird wire damage
- No drain blockage
- No damage to vent structure

For all necessary repairs call Airocle 1800 805 062
